Question 1 [C01] [10 Points]

In the enchanted land of **Eldoria**, a mysterious crystal has been discovered, inscribed with a **P-digit Ancient Number**. Scholars believe this number holds hidden power, unlocked only by a special digit **N**.

As you explore the crystal, examine the number digit by digit:

- If the special digit **N** is found in an odd position, the crystal awakens with magic equal to the product of all digits in odd positions.
- If **N** is found in an even position, the crystal's energy is revealed as the product of all digits in even positions.
- If **N** is not found, the crystal remains dormant, and no magic is possible.

Write a Java program to display whether **N** was found and the resulting magical product, or indicate that no magic is possible.

Sample Input 1	Sample output 1
Ancient Number: 345689 Special digit: 5	Special digit 5 is found in the 4th position. Magic number is : 120 Explanation: As the number is found in an even position from the right, magic number = $8 * 5 * 3 = 120$
Sample input 2	Sample Output 2
Ancient Number: 93578 Special digit: 2	No Magic is possible
