Question 1 [C02] [10 Points]

A **digital banking** application is introducing a password strength validation system to enhance account security. Whenever a user creates or updates a password, the system must ensure that the password follows the bank's security rules.

As a Java developer, your task is to write a program that checks whether a given password is strong or weak. The password must be at **least 8 characters long and must contain at least one uppercase letter, one lowercase letter, one digit, and one special character (any character other than a letter or digit)**. The program will take the password as input and display "Strong Password" if all the conditions are satisfied; otherwise, it will display "Weak Password".

Sample Input	Sample Output
Enter password: NewYear2k26	Weak Password
Enter password: thisIs@18digitPass	Strong Password
Enter password: CSE110isFUN	Weak Password
